## EDUCATION

### Digital School Kosovo

Full Stack Software Developer

Ferizaj, KS

Sep. 2018 – Sep 2023

### University of Prishtina

Computer and Software Engineering

Prishtina, KS

Sep. 2024 – Current

## EXPERIENCE

### Internal Software Developer

Starlabs Dev

Sep. 2023 - Nov. 2024

Prishtina, KS

- Led the frontend redesign of the Internship Platform, implementing a modern UI and improving site UX.
- Developed and maintained new features, including a multi-stage in-app interview process, streamlining the intern recruitment process.
- Contributed to the tech stack migration of our CRM system — transitioning to Laravel and Vite for improved performance and scalability.

### Full Stack Software Developer

Brigada Dev

Feb. 2025 – Mar. 2025

Prishtina, KS

- Contributed to the migration of multiple Management System applications to a modern tech stack using React.js for the frontend and Laravel for the backend.
- Handled the maintenance and bug/error fixing of several CMS systems.
- Focused on improving performance, maintainability, and scalability through the adoption of the new stack.
- Communicated and coordinated with our team, to execute realtime changes based on our clients demands

### Full Stack Software Developer

Self Employed

Jan 2023 – Current

- Designed and delivered custom responsive websites for local businesses and individuals, integrating branding, user-friendly layouts, and SEO best practices.
- Led the Full Stack development in multiple hackathons, notably securing 2nd place at Junction 2024 with a team solution for Lääkärikeskus Aava, a Finnish Medical Center.
- Integrated best SEO practices and responsive design principles to boost visibility and ensure accessibility on all screen sizes

## PROJECTS

### Aava Match | PHP/Laravel, JavaScript ES6, HTML5/TailwindCSS, MySQL, Gemini AI

Nov. 2024

- Developed a matchmaking platform for Lääkärikeskus Aava (Finnish medical facility) to reduce job application burnout by pairing candidates with their specialists.
- Developed features including an AI matchmaking algorithm, custom company dashboard, filtering system, doctor availability matching, and real-time feedback.
- Designed the frontend with modern UX principles and implemented backend logic to ensure speed and reliability.
- Completed in under 48 hours during the biggest hackathon in Europe, JunctionX, earning 2nd place among over 1000+ participants.

### Pupill | HTML5/CSS3, JavaScript ES6, PHP, SQL, Git

Jun. 2023

- Developed Pupill, an LMS designed to digitalize school learning and ensure accessibility for all users.
- Recognized as “Best EdTech Project” by the Albanian ICT Awards, one of the country’s top individual tech honors.
- Built as a multi-role platform with features like staff management, online grading, video meetings, and data visualization.
- Independently designed and built the full platform within a condensed development timeline.
